

Of the 3,025 ways eight children can take sides, just 28 are one against one

Every possible split into two opposing sides, with anyone left over staying out of it.

These are possibilities, not arguments that happened.

Source: OEIS A000392, $S(n+1, 3)$; one against one is $n(n-1)/2$ · computed 2026-08-12 · exact counts, nothing estimated
