

Four children can take sides in 25 ways, and 6 of those are one against one

Every possible split into two opposing sides, with anyone left over staying out of it.

These are possibilities, not arguments that happened — and the commonest case of all, nobody taking sides, is not among them.

 one side  the other side  staying out

One against one — the sibling pairs (6 of 25)

One against two (12)

One against three (4)

Two against two (3)
